### **Source Scientific Chosen to Manufacture Innovative System for NeoMatrix**

Irvine, CA - October 24<sup>th</sup>, 2005 - Source Scientific steps up its mission to bring high tech manufacturing jobs back to US shores this week as they announce another agreement to manufacture medical devices for an Irvine company focused on breast cancer screening. NeoMatrix, inventor of the HALO breast cancer screening system, has selected Source Scientific to manufacture this innovative system at their new Irvine manufacturing facility.

NeoMatrix begins introducing the HALO product this month, which also happens to be Breast Cancer Awareness Month. Their product rollout has to be rapid and flawless. Like many emerging high tech firms, they have the option of manufacturing it themselves, sending it offshore or choosing a local firm to handle the task.

*"Our business is all about innovative technologies and getting them to market, not operating a manufacturing facility", says NeoMatrix CEO Kevin Morton. "We wanted to take advantage of Source Scientific's existing infrastructure and experienced management".*

Source Scientific's experience with complex medical devices as well as their ability to scale up production rapidly in response to strong product demand was a key factor in making the decision. Production of the HALO system is expected to begin during the first quarter of 2006. Source Scientific is expected to increase its manufacturing staff by about 15%.

About Source Scientific. Source Scientific is a medical device developer and manufacturer located in Orange County, CA. It provides design and production services exclusively to other medical device companies.
